<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>The labour force as a percentage of the population 14 years of age and over. <sup>3</sup>The unemployed as a percentage of the labour force. <sup>1</sup>See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. <sup>3</sup>The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries.

<sup>1</sup>The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing, trapping and public administration and defence. <sup>3</sup>Includes storage, electric power, gas and water utilities. <sup>4</sup>Excludes domestic service. <sup>1</sup>Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories<sup>1</sup> by industries as in the revised standard industrial classification (million dollars)

| end of year<br>or month | total inven-<br>tories owned | non-durable<br>goods              | durable<br>goods     | food and<br>beverage | tobacco<br>products | rubber                           | leather                | textile                             | knitting<br>mills                 | clothing                              | wood               |

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>4</sup>End of period. Annual figures for inventories and unfilled orders are end of December values.

<sup>1</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>2</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

<sup>1</sup>Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. <sup>1</sup>End of period. <sup>2</sup>Does not include apartment-type machines. <sup>3</sup>Electric and other. <sup>4</sup>Gas types are included. <sup>5</sup>In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month.

Note: Components may not add to totals due to rounding. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field and processing plants less field flared and waste, Canadian sources only. <sup>4</sup>By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Sales of Manufactured and Natural Gas (45-005), D. B. S.

<sup>1</sup>Barrels of 35 Canadian gallons. <sup>2</sup>Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. <sup>3</sup>Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. <sup>4</sup>Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. <sup>5</sup>Includes inventories at end of period being held at gas plants and in storage caverns. <sup>6</sup>Includes stove oil, kerosene and tractor fuel. <sup>7</sup>Includes aviation gasoline and aviation turbo fuel. <sup>8</sup>Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. <sup>9</sup>Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. <sup>1</sup>The data are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: New Residential Construction (64-002), D. B. S.

<sup>1</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. <sup>2</sup>Planks and boards, flooring and square timber. <sup>3</sup>Hollow blocks including fireproofing and load-bearing tile. <sup>4</sup>For building insulation only.

<sup>5</sup>Figures cover the production of firms which normally account for 90 per cent of the total for Canada. <sup>6</sup>Factory sales of firms which normally account for 96% of total Canadian production. Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

<sup>1</sup>These indexes are available for January, April and August only. <sup>2</sup>Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. <sup>3</sup>Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. <sup>4</sup>Barley No. 1 feed; hogs grade "B" alive. <sup>5</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. <sup>6</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. <sup>7</sup>Quotations refer to steers of all weights. <sup>8</sup>Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

<sup>1</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.<sup>2</sup>Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.<sup>3</sup>Annual data are monthly averages of crop year. <sup>4</sup>Includes eggs for hatching.

<sup>1</sup>Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. <sup>2</sup>Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

<sup>1</sup>Monthly averages for 1964 and 1965 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. <sup>3</sup>Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

<sup>1</sup>Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. <sup>2</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. <sup>3</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

<sup>1</sup>Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. <sup>3</sup>United States and other foreign carriers. Excludes in transit passengers. <sup>4</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>5</sup>Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

<sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. <sup>1</sup>Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. <sup>2</sup>The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. <sup>3</sup>Total new settled-for ordinary sales in Canada.

<sup>4</sup>Under new or amended contracts.

<sup>1</sup>The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). <sup>2</sup>As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. <sup>3</sup>Includes also the furniture and furnishings industry. <sup>4</sup>Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. <sup>5</sup>Includes tobacco products, leather and miscellaneous manufacturing industries. <sup>6</sup>Includes also storage and communication industries. <sup>7</sup>Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

<sup>1</sup>This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from repayments of loans and advances, or from accumulations on annuity, pension and insurance funds. Figures are rounded and may not add to totals. ### A NOTE TO USERS

#### *Revisions to the Index of Industrial Production:*

(1) The unadjusted and seasonally adjusted monthly Indexes of Industrial Production in Table 16 and Page S-2 are revised for the entire period from January 1949 to date. In addition, the original and seasonally adjusted indexes of Real Domestic Product in Table 15 are also revised back to 1949 but only insofar as the industry components of the Index of Industrial Production are also components of these higher Real Domestic Product aggregates.

The D.B.S. publication "1966 Annual Supplement to the monthly Index of Industrial Production," (Catalogue No. 61-005) contains the complete revisions for all published components from January 1949 to the end of 1965 and the regular March issue will carry the revisions forward into 1966. A detailed description of revisions to the Index of Industrial Production is provided in the feature article appearing in this issue.

(2) The seasonally adjusted series on farm cash receipts on Page S-9 has been revised starting with the first quarter 1962.

(3) The data on the value of wholesale trade in Table 87 have been revised from January 1965 onwards.

## DESCRIPTION OF REVISIONS TO THE INDEX OF INDUSTRIAL PRODUCTION

The 1966 Annual Supplement to the monthly *Index of Industrial Production* publication (DBS Catalogue No. 61-005) presents revised estimates for the Index of Industrial Production and its components for the 1949-1965 period. No revisions were made to any of the indexes for the pre-1949 period and these remain as the best available indicators. The revised indexes shown in Tables 1 and 2 of the Annual Supplement replace the previously published record (for the period commencing with 1949), contained in DBS Reference Paper, Catalogue No. 61-502, *Revised Index of Industrial Production, 1935-57*, the regular monthly *Index of Industrial Production* publication (up to and including the February 1966 issue) and the annual supplements thereto. Starting with the March 1966 issue the regular monthly publications will carry all industry indexes on the revised basis.

Revisions to the post-1948 period stem from the following:

1. The incorporation of more recent census-based annual levels (benchmarks) into the historical record for manufacturing, mining and electric power and gas utilities.
2. The substitution of a few monthly projectors.
3. The incorporation of revisions made to the underlying data subsequent to their use in the heretofore published Index of Industrial Production.
4. The use of an improved method of adjusting monthly series to annual benchmark levels.
5. The re-seasonal adjustment of all components of the monthly Index of Industrial Production for the entire 1949-65 period.

The revised data for the Index of Industrial Production and its components have also been incorporated into the quarterly and annual Real Domestic Product estimates presented in Table 3 of the 1966 Annual Supplement. These latter estimates were first published in DBS Occasional Paper, Catalogue No. 61-505, *Indexes of Real Domestic Product by Industry of Origin*, and have been kept up to date in the monthly *Index of Industrial Production* publication. The changes in Real Domestic Product are due entirely<sup>1</sup> to the incorporation of revisions

to the Index of Industrial Production for the 1949-65 period. Thus only those special industry groupings of which the Index of Industrial Production (or any of its components) forms a part are revised from earlier published levels.

The present revisions retain the 1949 weight and reference base and constitute the first stage of a several-stage programme, which will extend over a number of years, and is aimed at improving the quality and general usefulness of the Real Domestic Product by industry of origin data, including the Index of Industrial Production. Census-based annual benchmarks had not been calculated for the Index of Industrial Production beyond the mid-1950's.<sup>2</sup> A major objective of the present revision was to remedy this situation and comprehensive annual benchmarks were accordingly calculated for all industries for at least the year 1959 on a 1948 Standard Industrial Classification (S.I.C.)<sup>3</sup> basis.

The next stage in this programme will consist of converting the entire Real Domestic Product system to the 1960 S.I.C.<sup>4</sup> and to a 1961 weight and reference base. Thus, in regard to the Index of Industrial Production components it should be noted that all post-1959 indexes are subject to further revisions. In the industries outside the area of the Index of Industrial Production, benchmark levels will also be updated to 1961. This includes the incorporation of the latest (1961) Decennial Census data, and therefore the historical record from 1951 forward will be changed for such industries as agriculture and retail and wholesale trade.

Table A shows an analysis of the revisions made to the Index of Industrial Production and its major components as well as their effects on the higher Real Domestic Product aggregates. The revised annual levels for these industry groups are shown in Tables B and C, while Charts 1 and 2 compare the revised series shown in Tables B and C with the previously published levels for the same industry groupings. Charts 3 and 4 show the revised and previously published total Index of Industrial Production and total manufacturing series on a seasonally adjusted monthly basis.

<sup>2</sup> See Reference Paper No. 61-502, Appendix C.

<sup>3</sup> *Standard Industrial Classification Manual*, DBS, 1948.

<sup>4</sup> DBS Occasional Paper, Catalogue No. 12-501, *Standard Industrial Classification Manual*, 1960.

<sup>1</sup> For some industry groups outside the area of the Index of Industrial Production, rounding differences may exist between the indexes previously published in Reference Paper, Catalogue No. 61-505 and the monthly *Index of Industrial Production* publication (61-005) on the one hand, and the figures presented in Table 3 of the 1966 Annual Supplement on the other. Such differences have been caused by the use of computer methodology adopted for some aspects of the work during the course of the present revision.

| 1962 .....         | 3.0   | 3.2                                    | 5.6                        | 8.4                            | 9.9           | 6.0    | 0.1                              | 100.0   | 88.7          | 11.3   | —                                |
| 1963 .....         | 3.4   | 3.8                                    | 6.5                        | 9.9                            | 11.5          | 8.1    | —                                | 100.0   | 87.5          | 12.5   | —                                |
| 1964 .....         | 3.7   | 4.0                                    | 7.0                        | 10.3                           | 12.6          | 6.1    | —                                | 100.0   | 90.9          | 9.1    | —                                |
| 1965 .....         | 3.9   | 4.2                                    | 7.3                        | 10.8                           | 13.3          | 5.3    | —                                | 100.0   | 92.5          | 7.5    | —                                |

<sup>1</sup> The per cent revision is derived by dividing the revised index levels by the previously published figures for each industry group.

<sup>2</sup> As the revisions originate solely from manufacturing, mining and electric power and gas utilities, the total revision to the Index of Industrial Production for each year contributes 100 per cent of the revision to Real Domestic Product.

<sup>1</sup> Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c. and domestic service.

<sup>2</sup> Includes transportation, storage and communication; trade; finance, insurance and real estate; public administration and defence; community, recreation, business and personal service.

As can be seen from the charts and from Table A, the general effect of the revisions was an increase in the level of the Index of Industrial Production and its chief components as well as the levels of all the higher aggregates of which they form a part. Manufacturing was by far the largest contributor to the change in the Index of Industrial Production in any one year. Thus the pattern of revisions to the total Index is very similar to that in manufacturing. In contrast to the gradual nature of the revisions to manufacturing, the changes in mining were largest in 1959 and were more moderate thereafter. The revisions to electric power and gas utilities were negligible for most years. The largest change in annual level for the Index of Industrial Production occurred in 1965, with the revision to the Index amounting to 10.8 per cent, while the level of total Real Domestic Product was raised by 3.9 per cent in that year. As a result of these revisions, a somewhat higher rate of growth for the post-war period emerges for both of these aggregates (see Table D).

**TABLE D. Rates of Growth,<sup>1</sup> 1946 - 65**

|   | Old index | Revised index |
|---|-----------|---------------|
|   | per cent  |               |
| Real Domestic Product .....                       | 4.18      | 4.41          |
| Real Domestic Product, less agriculture .....     | 4.48      | 4.73          |
| Index of Industrial Production <sup>2</sup> ..... | 4.98      | 5.61          |
| Mining .....                                      | 8.57      | 9.10          |
| Manufacturing .....                               | 4.04      | 4.77          |
| Non-durable manufacturing .....                   | 3.98      | 4.82          |
| Durable manufacturing .....                       | 4.12      | 4.73          |
| Electric power and gas utilities .....            | 9.56      | 9.58          |

<sup>1</sup> Based on the least squares of logarithms method.

<sup>2</sup> Includes manufacturing, mining and electric power and gas utilities.

The revisions have also slightly altered the cyclical amplitude of the above two aggregates, resulting in smaller peak-to-trough declines and larger trough-to-peak increases during the two most recent cycles in economic production. The cyclical turning points in aggregate production remain unchanged.

For the year 1959 comprehensive annual benchmarks, based on Census of Industry data, were calculated for all industries within the Index of Industrial Production on a 1949 weight and reference base. The reason for selecting the year 1959 was that it represented the last year for which the manufacturers' census was taken on the basis of the 1948 S.I.C.

For the years 1950-58, inclusive, census-based annual levels were calculated for a large portion of manufacturing industries. For some manufacturing industries, however, benchmarks were calculated only for part of the period while for the remainder benchmarks were not calculated for any of these intervening years. Table E shows the incidence of benchmark coverage in the 1949-59 period. Estimated annual levels were derived for each industry for all years for which a census-

based benchmark was not calculated. This was done by interpolating on the basis of the annual average of the monthly index for that industry, on the assumption that the gap which existed between the two series in 1959 had developed gradually during the period for which no benchmarks were available.

**TABLE E. Contribution of Benchmark - Represented Industries to Total Manufacturing, by Years, 1949-59<sup>1</sup>**

|            | Per cent |
|------------|----------|
| 1949 ..... | 100      |
| 1950 ..... | 82       |
| 1951 ..... | 82       |
| 1952 ..... | 78       |
| 1953 ..... | 78       |
| 1954 ..... | 72       |
| 1955 ..... | 67       |
| 1956 ..... | 63       |
| 1957 ..... | 61       |
| 1958 ..... | 58       |
| 1959 ..... | 100      |

<sup>1</sup> Calculated on the basis of weighted index points.

For the post-1959 period preliminary annual levels were estimated for the bulk of manufacturing industries by applying trend adjustments to the annual averages of the basic monthly projector. These adjustments were based essentially on the trend of the gap between the annual indexes and the monthly projectors that had developed during the 1949-1959 period. Some post-1959 trend adjustments were modified in the light of other data such as current dollar shipments and available industry selling price indexes.<sup>3</sup>

In the case of mining and electric power and gas utilities, benchmark indexes, based on annual Census of Industry data, were calculated for all industries for every year in the 1949-62 period. For some components of mining, i.e., iron ore, coal and asbestos mining, preliminary annual levels were calculated up to and including the year 1963. For the period subsequent to these benchmarks, production is projected on the basis of the movement in the underlying monthly projectors without further trend adjustment.

As noted before, all indexes for the post-1959 period are subject to further revision during the course of converting the system to a 1961 weight and reference base and to the 1960 S.I.C.

<sup>3</sup> See DBS Occasional Paper, Catalogue No. 62-515, *Industry Selling Price Indexes*, for a description of these price indexes.

**TABLE F. An Analysis of Revisions Made to Manufacturing Industry Groups, Selected Years**

|   | 1949<br>weights | Per cent revision in index level <sup>1</sup> |       |       | Per cent contribution to revision<br>in manufacturing |       |       |
|---|-----------------|---|-------|-------|---|-------|-------|
|   |                 | 1950  | 1959  | 1965  | 1950  | 1959  | 1965  |
| Manufacturing .....                                 | 27.340          | 0.5   | 6.1   | 13.3  | 100.0   | 100.0 | 100.0 |

| Non-metallic mineral products .....                 | 0.794           | -   | - 2.7 | - 4.1 | - 0.1   | - 2.0 | - 1.3 |

<sup>1</sup> The per cent revision is derived by dividing the revised indexes by the previously published figures for each industry group.

As in the case of the annual indexes, there are no changes to the previously published monthly Index of Industrial Production and its components, for the years 1946, 1947 and 1948 either on a seasonally adjusted or unadjusted basis. The monthly record of seasonally unadjusted data for the year 1949 is generally affected only by the adoption of the computer method of adjusting monthly indexes

to annual levels which is discussed below. In those cases where new monthly indicators were substituted, the record is, of course, changed for the entire 1949-65 period. The monthly seasonally adjusted indexes have all been affected by re-seasonally adjusting the entire 1949-65 period. For these reasons some discontinuity may exist between 1948 and 1949, on a monthly basis.

The computer method of adjusting monthly indexes to annual levels, which was used to adjust all series for the 1949-65 period is described in detail in Reference Paper 61-505.<sup>6</sup> Its most important characteristic is that it retains the original seasonal pattern of a monthly series, while adjusting it to new annual levels. Since this method had already been used for adjusting all indexes outside the area of the Index of Industrial Production, this revision afforded an opportunity to introduce the better method to all the components of Real Domestic Product.

It should be noted that some of the monthly man-hour based indexes show different monthly movements from the earlier published material. Previously, the underlying man-hour series had been adjusted by applying output per man-hour factors on a monthly basis in an attempt to introduce some elements of trend-cycle not properly reflected in the labour input series used to represent output.<sup>7</sup> In the previously published series particularly strong reliance was placed on these output per man-hour corrections, beginning in the mid-1950's, mainly because of the absence of annual benchmarks. However, revisions and S.I.C. changes made to the related shipments and inventory data, which were used as the basis for modifying the output per man-hour trend adjustments, had in part invalidated this approach in the post-1960 period. For purposes of the present revision, the use of the modified monthly output per man-hour adjustments has been discontinued, and the basic man-hour series are adjusted to the new annual levels by use of the computer method referred to above.

Index of Industrial Production users will recall the problems encountered in the monthly measurement of output in the **clothing industry**<sup>8</sup> which necessitated the introduction of a break in the continuity of this series beginning in January 1963. This revision now presents a new series on total clothing production for the entire 1949-to-date period at more correct levels and the discontinuity no longer exists. The measure is now based on a monthly man-hour projector adjusted to annual benchmark levels for the entire 1949-59 period, and is extrapolated into the current period on the basis of a trend correction to the man-hour data.

In the case of the **acids, alkalies, salts and fertilizers industry**, the basic measure used throughout the 1950's and early 1960's was adjusted man-hours. Effective with the January 1964 data, a new series, based on a broad range of commodities produced in the industry, had been introduced. This more sensitive series has now been carried back to January 1958. Users will note distinctly different

seasonality in the unadjusted monthly series before and after January 1958. On a seasonally adjusted basis, the break has been minimized through separate seasonal adjustment of the two periods.

Prior to the present revision, production in a number of food-producing industries was measured on the basis of quarterly output of many commodities and pro-rated monthly on the basis of man-hours. The industries so handled were **fruit and vegetable preparations, breakfast foods, biscuits and crackers, bread and other bakery products, confectionery, and miscellaneous food preparations**. This approach resulted in a relatively high incidence of estimation in the current period. Effective with this revision, the measures for these industries are based on trend-adjusted man-hours.

There are several changes in **mining** which require special mention. Within the non-metal mining group, the burgeoning **potash industry** was previously included only as of January 1964, although some production had occurred as early as 1959. All potash production has now been included in **miscellaneous non-metal mining** in the appropriate time periods prior to 1964 as well.

In the case of **metal mining**, several changes were made, the most important of which occurred in the **iron ore industry**. This industry's output measure had been based on a calculation by individual establishment, each of whose outputs was valued at base year (1949) unit prices. With the tremendous development of this industry in the 1950's and early 1960's, both in terms of technology and the number of establishments, this approach necessitated the estimation of most base year unit prices. In the present revision the computation remains on an individual establishment basis but the unit prices used to combine outputs are those for 1961. This change was made in order to reflect more properly the contribution of new processes and products, and the revised indexes are at a considerably higher index level than the previously published series. It should be emphasized that the entire series remains on a 1949 reference base and the 1949 weight for the industry remains unchanged.

The previously published monthly series for gold was a total commodity series, i.e., gold produced in all industries was measured. Effective with this revision, the monthly series has been changed, beginning with the year 1949, to measure only gold produced in the **gold mining industry**. Other gold production (that is, that produced outside the boundaries of the gold mining industry) has been included with **other metal mining**.

Finally, it should be noted that the introduction of some new non-metal mining products as well as the isolation of the gold mining industry has resulted in marginal shifts in the 1949 industry weights within the non-metal and the metal mining groups, with the weight for each of these aggregates remaining unchanged.

## INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose by 0.8 per cent in March as all three components of the index contributed to the gain.

|      |   | total industrial production (1949=100) | manufacturing (1949=100) |          |              | (1949=100) |                   |              |

## INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income continued its upward trend in December.

Average hourly earnings in manufacturing dropped to \$2.13 in December while the average work week rose slightly to 41.3 hours.

|      |   | total<br>labour income | wages<br>and salaries in<br>manufacturing | average hourly earnings in manufacturing |          |              | average weekly hours in manufacturing <sup>1</sup> |          |              |

## CONSTRUCTION (More detail in Tables 67, 72 and 73)

Total value of building permits declined in March primarily as a result of a decrease in the non-residential sector. Housing starts dropped in April from the irregularly high level in March; however, completions picked up significantly in the period.

| value of building permits |   |                 |                 | new dwelling construction, centres 5,000 and over |                    |                              |

## EXPORTS AND IMPORTS (More details in Tables 91 and 92)

Total exports declined in March reflecting decreases to the United Kingdom and "all other countries".  
Total imports were higher in March chiefly as a result of an increase from the United States.

|        | exports including re-exports (million dollars) |               |                |                     | imports (million dollars) |                    |                   |                     |
|--------|--|---------------|----------------|---------------------|---------------------------|--------------------|-------------------|---------------------|

<sup>1</sup>Gross National Product at market prices excluding accrued net income of farm operators from farm production. <sup>2</sup>Before dividends paid to non-residents; see also footnotes on Table 113. <sup>3</sup>Total of all monthly and quarterly series as in column 14, Table 90.

## PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The index of industrial common stocks moved up nearly 2 per cent in April following the decrease in March. The consumer price index rose again in April, with all main components of the index contributing to the gain.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

<sup>1</sup>Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. These figures are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D. B. S.

Table 7: national income and gross national product (million dollars)

| years and quarters                  | salaries, wages and supplementary labour income | military pay and allowances | corporation profits before taxes | deduct: dividends paid to non-residents | rent, interest and miscellaneous investment income | accrued net income of farm operators from farm production <sup>1</sup> | net income of non-farm unincorporated business | inventory valuation adjustment | net national income at factor cost | indirect taxes less subsidies | capital consumption allowances and miscellaneous valuation adjustments | gross national product at market prices <sup>2</sup> |

<sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. <sup>2</sup>Includes residual error of estimate. Source at bottom of Table 12.

Table 8: gross national expenditure (million dollars)

<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>The labour force as a percentage of the population 14 years of age and over. <sup>3</sup>The unemployed as a percentage of the labour force. <sup>1</sup>See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers. The total, however, includes all work stoppages. <sup>3</sup>The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries.
